Using the air purifier

Understanding the air quality light

The air quality light automatically goes on when the air purifier is switched on, and lights up all colors in sequence. After approximately 30 seconds, the particle sensor selects the color that corresponds to the surrounding air quality of airborne particles.

The color of the air quality light is determined by the PM2.5 reading.

PM2.5

AeraSense sensing technology accurately detects and quickly responds to even the slightest particle change in the air. It provides you with reassurance with real-time PM2.5 feedback.

Most of the indoor air pollutants fall under PM2.5 – which refers to airborne particle pollutants smaller than 2.5 micrometers. Common indoor sources of fine particles are tobacco smoke, cooking, burning candles. Some airborne bacteria and the smallest mold spores, pet allergen and dust mite allergen particles also fall under PM2.5.

PM2.5 level	Air quality color	Air quality level
≤12	Blue	Good
13-35	Blue-purple	Fair
36-55	Purple-red	Poor
>55	Red	Very poor

Troubleshooting

This chapter summarizes the most common problems you could encounter with the appliance. If you are unable to solve the problem with the information below, contact the Consumer Care Center in your country.

Problem

Possible solution

The appliance does not work properly.	The filter replacement alert is on but you have not replaced the corresponding filter. As a result, the appliance is now locked. In this case, replace the filter and reset the filter lifetime counter.
The airflow that comes out of the air outlet is significantly weaker than before.	The surface of the filter is dirty. Clean the surface of the filter (see Chapter 'Cleaning and maintenance').
The air quality does not improve, even though the appliance has been operating for a long time.	Check if the packing material is removed from the filter.
	Make sure that the filter (FY0900) is properly installed.
	Room size is large or the outdoor air quality is poor. For optimum purification performance, please close the doors and windows when operating the air purifier.
	There are indoor pollution resources. For instances, smoking, cooking, incense.
	Filters reach the end of life. Replace the filter with a new one.
The appliance produces a strange smell.	The first few times you use the appliance, it may produce a plastic smell. This is normal. However, if the appliance produces a burnt smell even if removing the filter, contact your Philips dealer or an authorized Philips service center. The filter may produce smell after being used for a while because of the absorption of indoor gases. It's recommended that you put the filter in a well-ventilated place for a couple of hours to reduce the smell.
The appliance is extra loud.	It's normal if the appliance runs at the Turbo mode.
	In Auto mode, the appliance will run in higher speed when the air quality is poor. When using the appliance in a bedroom at night, choose the Sleep mode.
	If anything drops into air outlet, it may also cause abnormal loud sounds. Immediate turn off appliance, and get foreign objectives out of appliance.
	If there is abnormal sound, contact the Consumer Care Center in your country.
The appliance still indicates that I need to replace filter, but I already did.	Perhaps you did not reset the filter lifetime counter. Switch on the appliance. Then touch and hold the  and  simultaneously for 3 seconds.
Error code "E1" displays on the screen.	The motor has malfunctions. Contact the Consumer Care Center in your country.

空氣品質指示燈的顏色取決於 PM2.5 的讀數。

PM2.5

AeraSense 感應技術能夠精確地偵測到空氣中最細小的微粒變化並快速反應。還能提供即時的 PM2.5 回饋資訊，讓您安心無憂。

大部分室內空氣汙染物未達 PM2.5 – 代表空氣微粒汙染物小於 2.5 微米。一般室內細小粒子來源為煙味、烹飪與燃燒的蠟燭。部分空氣中傳播的細菌和最小的黴菌孢子、寵物過敏原及塵蟎過敏原粒子也未達 PM2.5。

PM2.5 等級	空氣品質色彩	空氣品質等級
≤12	藍色	良好
13-35	藍色 - 紫色	普通
36-55	紫色 - 紅色	不良
>55	紅色	非常不良
